A version of AutoCAD for the Macintosh was also released in 1984, and the iOS version was first released in June 2008. While AutoCAD began as a standalone desktop program, the app has since been developed to include a web-based version as well. The mobile app, which features AutoCAD LT, is also available for free for non-commercial use. And that change is spurring local families to act. "The push towards changing what schools are focusing on is a huge thing," said Schenectady native Michael Barnhart, who is the father of two kids at the city's North Broadway School. In the year since his youngest has started high school, Michael has witnessed the school's enrollment shift. "We went from 32 kids to 47," said Michael, who is a retired EMT with the city's fire department. "Now you can't get in." In the past, the elementary school was overcrowded with just a few hundred students. But North Broadway Middle School had a waiting list of more than a thousand. That's in part because of the number of newcomers to Schenectady. Today, 6 percent of the city's population is Latino and that percentage is growing. And the number of new parents with children is growing in North Schenectady, where the median age is 30. So, like other parents, Michael and his wife are shifting their focus. They are choosing schools that allow them to homeschool their kids. They have been happy with their choice. As Michael has witnessed the shift in the city, he is learning about Schenectady's growth and what his children will face once they reach middle school. "I have a young man and a young woman," he said. "They are so different." Michael is not the only parent who is worried about how his kids will fit in. "It will be hard on them, I know that," said North Broadway parent Rachel Washburn. Washburn has two kids at the school. a1d647c40b
