We're joined today by the publisher of the Skeptics magazine, Dr. Carl Zimmer. And Carl, welcome to Free Thoughts. Dr. Zimmer: Thank you. Anthony: So this is Carl Zimmer. He's a molecular biologist. He works on malaria, some of his current work and his past work has been in several areas. He also writes for the New Yorker magazine, and has written several books and award winning books. His latest, "King of Plagues" which is one of the books I mentioned earlier has just come out and that's a fascinating study of how our knowledge of malaria has changed. And it's interesting how that knowledge has evolved. And I wanted to talk to Carl about some of the differences, recent differences in the science that we're talking about between people and animals. Does he agree that we have an ethical imperative to take care of all animals, no matter how we classify them? Does he have any advice or thoughts on this that a Skeptic ought to know? Dr. Zimmer: Well, I think there's a big difference between the nature of our encounter with animals and the nature of our encounter with each other. If you go back in history, I mean we had lion, tigers and bears and jaguars running around the Savanna. And they were the kings of the jungle. And they were extremely important. And we hunted them to extinction. And we came to think of them as commodities, in some places as companion animals, and yet we also kept them as pets. So you could have a pet lion or a pet tiger or a pet bear. But we didn't just have animals around the Savanna, we had dogs and we had cats and we had horses and we had cows.

AmeriCrypt Password Manager is a neat free software application that can create strong and safe passwords to protect your online accounts. It features a set of instructions and tools that help you create and protect passwords, something that is rather difficult to do, especially if you're using more than one account. All the passwords are stored in a folder that is accessed via a toolbar icon that appears in your system tray. The tool allows you to back up passwords to the folder and enable or disable your password system for each account. There are also a series of graphical interface tools that allow you to create, edit and test your passwords. All the tools are really easy to operate and intuitive. Personalise your password process The application features multiple account support that lets you configure the way your password system works. There are a number of settings that allow you to specify how each account should work. You can manage the number of characters for each password, disable or enable the password option, and specify a separate password for each account. Use the multiple accounts feature in order to protect different logins, and the different passwords can be applied to each account or it's a random selection for all the accounts. The application gives you the option to leave the password set as is, or you can specify that the password should be changed daily,
