The Stencil itself has a Position that defines where it is applied, and a size that determines how many shapes are contained in the stencil. Create a Stencil View: Users can create a Stencil View with specific attributes, such as stencil dimensions and geometry (sketch object, line object, etc.). Create a Stencil Template: Users can create a Stencil Template that is inherited and applied to other objects. Apply the Stencil: A Stencil is applied to a drawing or sketch, layer or another object. Any help would be much appreciated. Thanks Paul A: The image you've downloaded from Github seems to be incorrect. The keygens I downloaded from the Autodesk website are exactly the same.
