## Consumerawarenessprojectforclass11thpdfPORTABLE Download

February 1, 2016 - PROJECT WORK COMPILERS: - Salakhudin khabibulla. Grade: 11th century CONSUMER. AWARENESS. GRATITUDE I am deeply indebted to our economy. .... Last year, food prices began to rise, we we couldn't afford to eat what we buy... I owe a lot to our economy. We cannot afford to eat what we buy without feeling guilty about it. We cannot afford to use amenities like the bathroom for long hours without feeling guilty. We cannot afford to own our own home without feeling guilty about it. ....

A: I was running into this kind of problem. The error indicated that when I ran the application the version I was using was older than the one that I was referencing. I tried stopping the application, cleaning the solution and re-building. When I did this the error didn't reoccur. One workaround is to use a build configuration that targets a specific version of the framework you're using.

NAA (N-acetyl-L-aspartic acid) is a simple amino acid and has been found to be an effective diuretic and its use in the treatment of acute renal failure is well established. An orally active N-acetyl derivative of N-acetyl-L-aspartic acid, N-acetyl-L-aspartyl-L-phenylalanine methyl ester (Aspartame) has also recently been approved for use as a sugar substitute in diet soft drinks, chewing gum and other food products. The present invention provides a method for

---

synthesizing N-acetyl-L-aspartic acid which can be used as a food additive or as a starting material for the synthesis of Aspartame. It is known in the art that N-acetyl-L-aspartic acid can be prepared by reacting L-aspartic acid with acetic anhydride in the presence of concentrated sodium hydroxide in toluene at 100.degree.-150.degree. C. as described by P. R. Upp et al., J. Am. Chem. Soc., vol. 77, p. 2552 (1955). However, this reaction cannot be considered commercially useful because the low temperature and high concentration of the sodium hydroxide solution which are required to maintain an azeotrope with toluene are such that they are detrimental to the health and safety of the workers involved in the reaction. Further, the sodium hydroxide promotes hydrolysis of the acetic anhydride, thereby complicating the workup of the product. It is also known in the art that N-acetyl-L-aspartic acid can be prepared by

---

treating aspartame with dilute aqueous hydrochloric acid to form N-acetyl-L-aspartyl-L-phenylalanine (Aspartame), which is then alkalized to the dihydrogen salt, filtered, dissolved in benzene, refluxed with refluxing dil
